On Friday, Comal County hospitals reported caring for 58 COVID-19 patients; of those, 18 are in intensive care, and 10 are on ventilators. Not all of these patients are necessarily county residents; likewise, not all county residents hospitalized with COVID-19 are in Comal County hospitals.

As of Friday morning, Public Health has received reports of the following test information:

- 40,167 tests conducted
- 3,769 confirmed cases
- 1,906 probable cases
- Nine suspect cases

This week, the State of Texas Department of State Health Services changed the way it reports the seven-day positivity rate and Comal County is following suit. The positivity rate will now be split into two categories:

- 1. Molecular; calculates the percent positive only for PCR tests.**
- 2. Antigen; calculates percent positive only for antigen tests.**

The seven-day Molecular positivity rate for Friday in Comal County is 13.89%.

The seven-day Antigen positivity rate for Friday in Comal County is 17.22%.

Testing is only done on Tuesday and Friday, and you must have an appointment.

Comal County's Public Health Department reminds every one of the importance of following CDC guidelines of wearing a face covering, social distancing, staying home when you are sick and hand hygiene.

Probable case definition

"Probable case" is a category established by the Texas Department of State Health Services to describe those who do not have a positive PCR test for COVID-19 but meet two of the following three criteria:

- Meets clinical criteria AND epidemiologic linkage with no confirmatory laboratory testing performed for SARS-CoV-2.
- Meets presumptive* laboratory evidence.
 - Presumptive* laboratory evidence:
 - Detection of SARS-CoV-2 by antigen test in a respiratory specimen
- Meets vital records criteria with no confirmatory laboratory evidence for SARS-CoV-2.

A probable case is treated identically to a confirmed case and counts toward the County's positivity rate and total case tally.

Suspect case definition

A "Suspect case" meets supportive laboratory evidence with no prior history of being a confirmed or probable case. It is also counted towards the total case tally.

Supportive Laboratory Evidence means:

- **Detection of specific antibody in serum, plasma, or whole blood**
- **Detection of specific antigen by immunocytochemistry in an autopsy specimen.**
